FOREWORD

TO: Hospital Administrators
Medical Staffs and Nurses

This is the 1964 report of certain vital statistics occurring in Montana hospitals. The figures used in this report are those taken from the quarterly statistic cards that are sent to this office by the 65 hospitals offering obstetrical service.

In the report this year, a column showing the live births for 1963 will be added; this will enable the individual hospital to make a comparison with the figures of this year. Other than this, the format of the report will be the same as previous years.

Since Montana does have some home deliveries, the figures in this report will not be the same as those which are obtained from birth certificates sent to the Division of Vital Statistics. The number of home deliveries for the year total 100. This figure remains about the same each year.

In 1964 there were 14,698 births in Montana, by place of occurrence. (This does not include home deliveries.) There were 249 neonatal deaths with a rate of 16.9 per 1,000 live births. There were 200 stillbirths with a rate of 13.7 per 1,000 live births. Perinatal deaths numbered 449 with a rate of 30.6 per 1,000 live births. Deaths occurring after one month of age to 12 months numbered 31 for the period.

During the following years, live births in Montana totaled:

1964	14,698
1963	15,630
1962	16,515
1961	16,764
1960	17,045
1959	17,166
1958	17,448
1957	17,980

During the reporting year of 1964, there were nine maternal deaths. Seven of these occurred in hospitals.

The Phenylketonuria Testing Program of the State Board of Health was started early in 1963, and is available to all hospitals on request. Since its inception, there are 52 participating hospitals.

This report is possible because of the cooperation of all hospitals. It is anticipated that hospitals will continue their cooperation in the reporting of vital statistics.
